

Regular cleaning and maintenance will keep your vanity looking great and operating properly. As we use a number of different products and brands, you will need to review their own care and maintenance procedures relevant to your order.

- For our polyurethane cabinets, and cabinet internals use only a clean microfibre cloth with a very mild, non-abrasive detergent. Ensure to completely dry after wiping down.
- Monitor your painted surfaces regularly for any chips or scratches that expose raw materials, these need to be sealed to avoid moisture penetration.
- Check inside your vanity for leaks regularly, as failure to do so may result in water damage to the cabinet.

Tesrol door finishes, see the Tesrol website for cleaning and maintenance resources.

Caesarstone tops, see Caesarstone's website for cleaning and maintenance resources.

Blum for all drawer/door hardware see the blum website for cleaning and maintenance resources.
